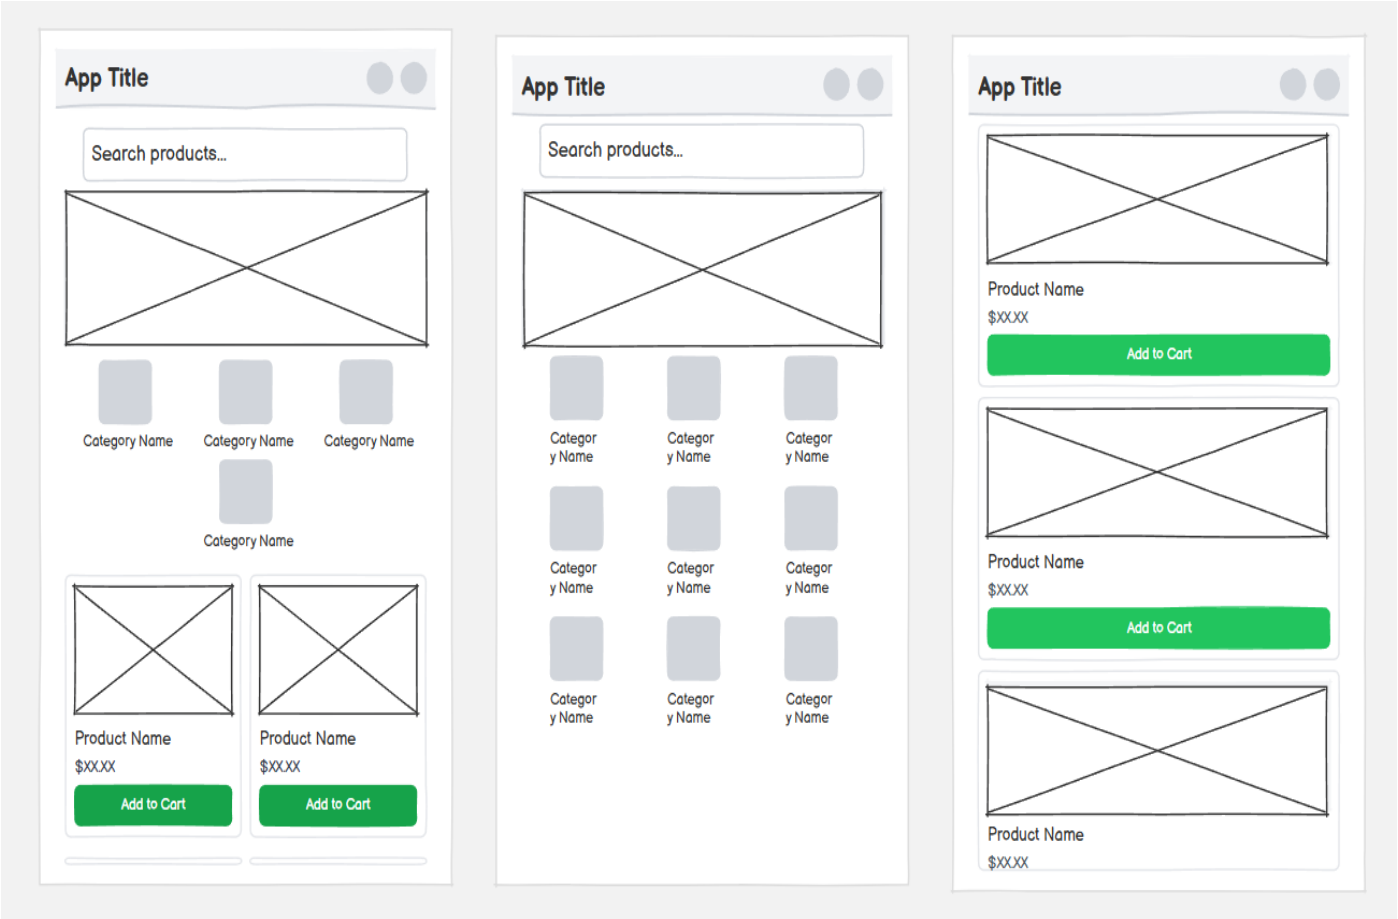
EXPERIMENT 8 : Create storyboards representing the user flow for a mobile E-commerce app using Balsamiq

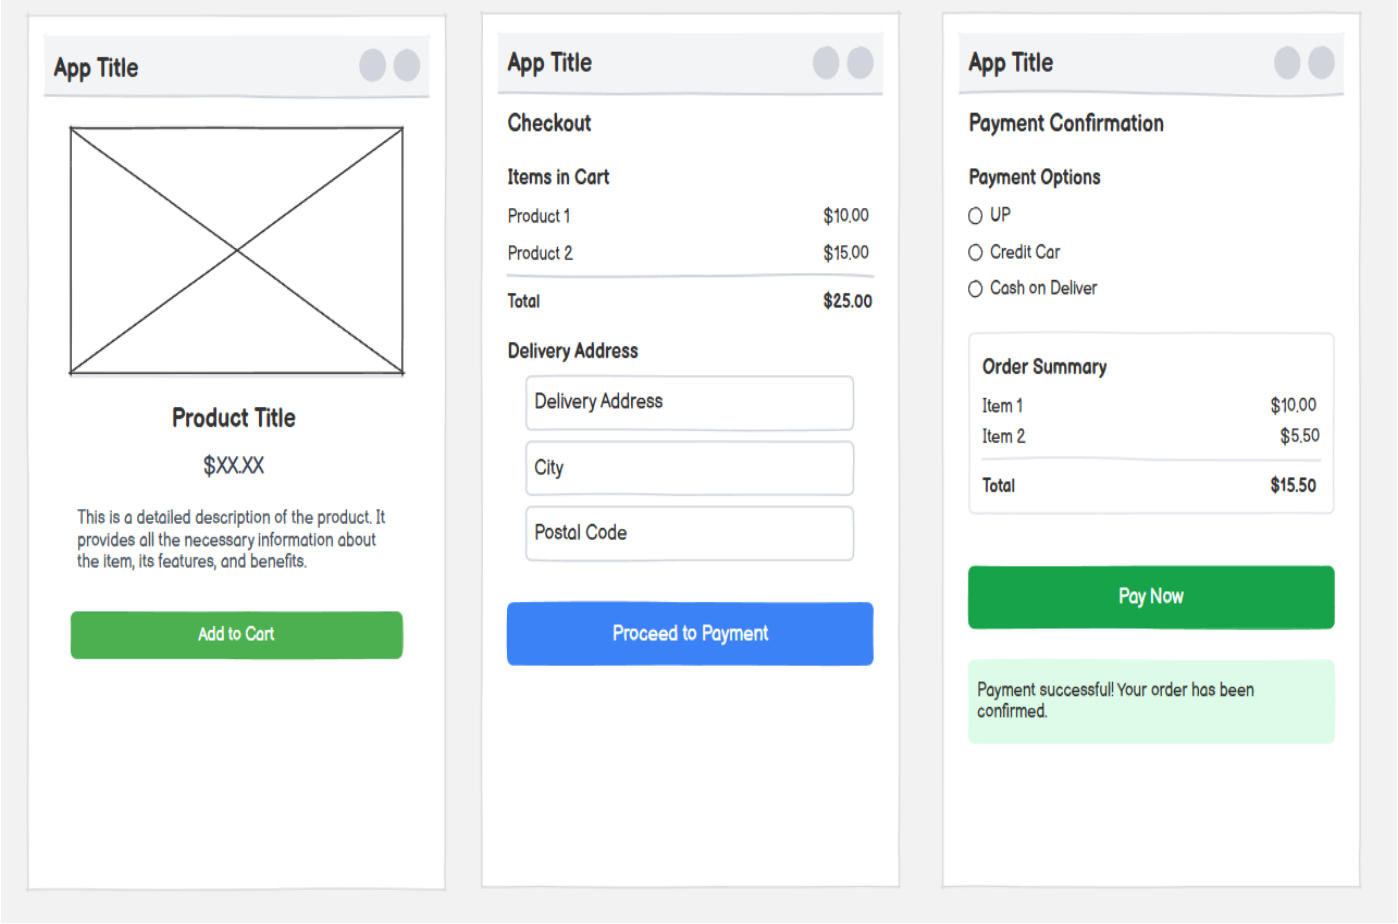
AIM:

To create storyboards representing the user flow for a mobile E-commerce application using Balsamiq.

Procedure:

1. Tool used: Balsamiq Wireframes.
2. A new project was created and mobile screens were added.
3. Screens were designed to simulate the complete shopping experience from browsing to checkout.
4. UI components such as buttons, text fields, images, icons, and dropdowns were used from Balsamiq's library.
5. The wireframes were kept simple, clean, and focused on user interaction and flow.





Output:

The storyboard consists of the following screens:

- Homepage with search bar, banner, categories, and featured products
- Categories screen showing different product categories
- Product list screen displaying items with price and “Add to Cart” option
- Product details screen with full product information
- Checkout screen with cart details and delivery address
- Payment confirmation screen with payment options and success message

Result:

The storyboard for the mobile E-commerce application was successfully created, clearly demonstrating the user flow from product browsing to order confirmation.
